MICROSOFT DYNAMICS 365 BUSINESS CENTRAL

OUTGROWN SAGE50C? HOW DOES BC COMPARE?

OUTGROWN SAGE 50C? HOW DOES BUSINESS CENTRAL COMPARE?

If you are a growing business that has been using Sage 50C for some time, you may be experiencing business pains that it can no longer accommodate.

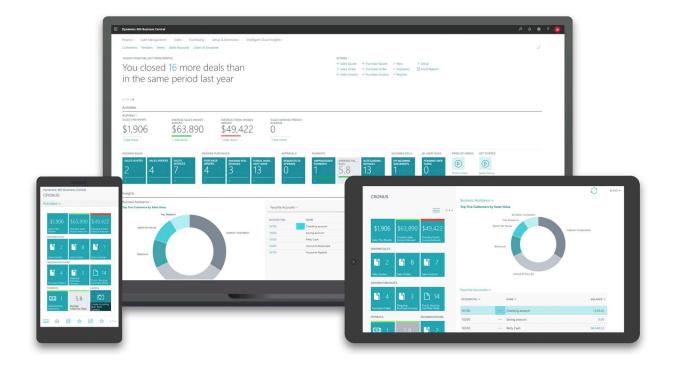

You may be in the market for a system that will not only resolve your current pains, but can also grow with you as a company.

As a full ERP, BC provides capabilities beyond accounting, ranging from contact management and job costing through to inventory and workflow management. Alongside the rest of the Microsoft product stack, it sits on Azure - a scalable platform with seamless integration with Outlook, Teams, Excel & Word, as well as the other Dynamics 365 apps and all the latest technologies for insight and automation, including Power Apps, Power Automate and Power BI.

Both Sage50c and DYnamics 365 Business Central (BC) are solutions for SMBs, however the two are very different. Sage 50c is a legacy system designed to help SMBs manage their accounts, with a focus on the purchase and sales ledger as well as reconciling their bank accounts.

BC is an end-to-end business management solution, designed for SMBs with 1-250 employees and caters for all the challenges a business may face when growing.

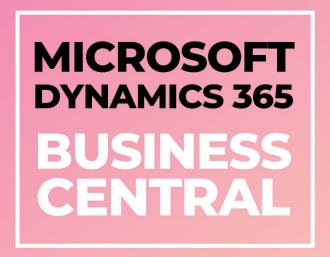

You can start small and grow as business requirements evolve.

	SAGE50C	BUSINESS CENTRAL
Market	Accounting solution targeted at single company SMB	All-In-one business management solution/ERP targeted at all SMBs
Functionality	- Chart of accounts - Sales Processes - Purchases & Processes - Bank Management - Tax Management (MTD Compliant) - Credit Card Processing - Basic Inventory	- General Ledger - Sales Quote to Cash Process - Purchase Quote to Cash Process - Bank Management - Tax Management (MTD Compliant) - Cash Flow Forecasting - Budget Management - Fixed Asset Manegement - Job Costing - Inventory & Planning - Warehouse Management - Assembly Management - Bill of Materials - Relationship Management
